 Location: Hyderabad, India

Professional Summary

Backend Engineer with 10+ years of experience building scalable, low-latency backend systems for financial and enterprise platforms. Specialized in distributed systems, event-driven architecture, microservices, and high-throughput transaction processing using Java and Spring Boot. Strong expertise in Kafka-based asynchronous systems, API performance optimization, resiliency patterns, and cloud-native deployments.

Work Experience

Advisory System Analyst

IBM

Hyderabad, India

Dec'21 - Present

- Engineered highly scalable backend systems using Spring Boot, integrating external services and databases, resulting in a 25% reduction in API response times.
- Designed and developed cloud-native microservices for financial products such as PPF, SSY, NPS, FD, and TD using Java 1.8, Spring Boot, gRPC, and Quarkus, ensuring high availability, low latency (<200ms), and SLA compliance.
- Built Kafka-based event-driven architecture for large-scale asynchronous processing and real-time analytics, improving backend scalability, decoupling services, and enhancing data processing performance by 30%.
- Engineered scalable backend systems integrating multiple external services and databases, while optimizing performance using Redis caching, Cassandra DB, and database tuning, reducing API response times by 40%.
- Developed secure RESTful and gRPC services with resilient design patterns such as Retry, Circuit Breaker, CQRS, and Singleton to improve fault tolerance, system stability, and inter-service communication efficiency.
- Automated CI/CD pipelines and deployments using Tekton, OpenShift, Docker, Kubernetes, Jenkins, and AWS services like EC2, S3, and Lambda, achieving reliable zero-downtime deployments and 99.9% application uptime.
- Built unit and integration test cases using Mockito and validated APIs with Insomnia, while actively contributing to Agile sprints, improving delivery efficiency, code quality, and cross-team collaboration.
- Delivered high-performance applications, boosting system scalability by 20% using advanced Java and AWS technologies.
- Deployed microservices using Docker and Kubernetes, achieving 99.9% uptime across all production environments.

Key Achievement: Increased product efficiency by 20% and achieved a 15% boost in user retention.

Sr. Analyst

Accenture

Hyderabad, India

Aug'20-Dec'21

- Architected a microservice architecture with Spring Boot, enhancing scalability and reducing latency by 25%.
- Migrated legacy COBOL-based CICS applications to modern Java 1.8 and Spring Boot microservices architecture, improving scalability, maintainability, and reducing system latency by 25%. Automated CI/CD pipelines using Jenkins, increasing deployment frequency by 40% with zero downtime during releases.
- Developed multithreaded backend applications, CICS web services, and secure RESTful APIs using Spring Boot and WebClient, improving module integration speed and API reliability by 30%.

- Optimized DB2 and Spring Data JPA database interactions, reducing query execution time by 35% and improving backend processing efficiency across distributed systems.
- Designed and provisioned scalable AWS cloud infrastructure using Terraform, creating reusable modules for VPC, EC2, RDS, S3, IAM, and ECS to automate secure deployments.
- Managed Docker containers and Kubernetes deployments while automating CI/CD pipelines using Jenkins, Maven, and GitHub, ensuring faster, zero-downtime deployments and environment consistency.
- Developed and executed unit test cases using JUnit, participated in Agile ceremonies and code reviews, and mentored junior developers to improve code quality, collaboration, and on-time delivery. Mentored 5 junior developers, resulting in a 25% improvement in code quality and adherence to standards.
- Pioneered Agile best practices, reducing sprint overruns by 10% and ensuring seamless cross-functional collaboration.
- Adhered to Agile methodology, actively participating in sprint planning, daily stand-ups, and retrospectives, improving team collaboration and on-time delivery by 20%.
- Improved module integration speed by 30% through secure RESTful APIs implemented with Spring Boot.

Key Achievement: Delivered a scalable microservice platform deployed across AWS, achieving high availability.

Java Consultant

Capgemini
Hyderabad, India

May'18-Jun'20

- Developed and maintained the FICO Push Alert batch processing system using Java 1.8, Spring Boot, and Spring Batch to process customer alert messages from message queues and generate output files efficiently.
- Built scalable Java-based backend services and secure RESTful APIs, improving system interoperability and enabling reliable data exchange between banking systems with 99.9% availability.
- Optimized event-driven processing and backend performance using AWS services such as SNS, API Gateway, S3, Lambda, and CloudWatch, reducing processing time by 30% and proactively resolving system anomalies.
- Streamlined infrastructure and deployment processes using Terraform, Jenkins, Gradle, Docker, GitHub, and WAS, reducing deployment times by 30% and improving release reliability.
- Enhanced database processing and data pipeline efficiency using Oracle and AWS data services, improving data retrieval and processing performance by 35%.

Key Achievement: Reduced deployment downtime by 50% while enhancing application uptime.

Java Trainee

Ajr Info systems pvt.ltd
Pune, India

Aug '15-Sep'17

- Improved and maintained backend infrastructure with Java and RESTful Web Services, improving system performance by 20% and ensuring high reliability.
- Developed and maintained backend services for the SCOCU low-code platform using Java, Spring, and RESTful APIs, improving system performance and reliability by 20%.
- Built RESTful APIs and third-party integrations with Gmail and SurveyMonkey, while implementing OAuth 2.0 for secure and scalable API access.
- Optimized build and deployment processes by transitioning from Ant to Maven, reducing build times by 25% and improving development efficiency.
- Enhanced code quality and deployment reliability using JUnit, Mockito, JaCoCo, Jenkins, Maven, and GitHub for testing, CI/CD, and version control.

Technologies and Languages

- **Programming Languages:** Java, Python
- **Frameworks:** RESTful Web Services, microservice, Spring (Spring Boot, Spring Cloud), JPA, Hibernate
- **Core Concepts:** Data structures and algorithms, RDBMS, Database Optimization, SQL, S.O.L.I.D. principles, TDD, J2SE, Design Patterns
- **Databases:** MySQL, PostgreSQL, DynamoDB, Cassandra, Azure cosmos DB
- **Cloud Computing & DevOps:** AWS, GCP, Docker, Jenkins, Terraform, Git, Kubernetes, Containerization, CI/CD, EC2, AWS Lambda, API Gateway, EKS, IAM, SQS, AWS S3, CloudWatch, ECS

- **Web Development:** HTML, CSS, JavaScript, Anuglar.js, HTML5, CSS3
- **Other skills:** Apache Kafka, Elasticsearch, Kibana, Apache Tomcat, XML, JSON, JUnit, Mockito, ETL, Jira, NoSQL

Education and Certifications

- **B. Tech Computer Engineering**, JNTUK, AP, India **2008 – 2012**
- Red Hat Certified Specialist in Containers
- IBM Certified Technical Advocate – Cloud V3
- **AWS Certified Cloud practitioner– CLF-C02**
- IBM Cloud for Financial Services

Soft Skills

- **Communication:** Clear and effective communication with cross-functional teams, stakeholders, and clients.
- **Team Collaboration:** Skilled in fostering collaboration and mentoring team members to achieve shared goals.
- **Problem-solving:** Strong analytical skills to troubleshoot and resolve complex technical issues efficiently.
- **Project Management:** Proficiency in Agile, Scrum methodologies, and tools like Confluence alongside Jira for better project documentation and tracking
- **Leadership:** Experience leading projects and guiding teams toward successful completion.
